## Revision History

| Version | Description  | Date              |
|---------|--|-------------------|
| V1.0.0  | Initial release.   | September 6, 2015 |
| V1.0.1  | <p>Updates:</p> <ol style="list-style-type: none"><li>1. Added the Inquire Product Information feature in Chapter 2.</li><li>2. Added the <b>Timeout between Decodes (Same Barcode)</b> feature for the Sense and Continuous modes in Chapter 4.</li><li>3. Added the <b>Polling Rate</b> feature and the Russian keyboard feature along with the programming procedure in Chapter 6.</li><li>4. Added the <b>Character Encoding</b> feature for PDF417, QR Code and Data Matrix in Chapter 8.</li></ol> <p><b>Note: You must have firmware version V1.00.016 or higher to use the new features above.</b></p> | June 2, 2016      |

# Table of Contents

|  |              |
|--|--------------|
| <b>Revision History .....</b>              | <b>- 3 -</b> |
| <b>Preface .....</b>                       | <b>1</b>     |
| Introduction .....                         | 1            |
| Chapter Description .....                  | 1            |
| Explanation of Icons .....                 | 2            |
| <b>Chapter 1 Getting Started .....</b>     | <b>3</b>     |
| Introduction .....                         | 3            |
| Features of the FR40 .....                 | 3            |
| Unpacking .....                            | 3            |
| FR40 Scanner .....                         | 4            |
| The Pinout of the Data Port (default)..... | 5            |
| Connecting the FR40 to a Host .....        | 5            |
| Using USB Cable .....                      | 6            |
| Using RS-232 Cable .....                   | 7            |
| Power On, Power Off, Reboot.....           | 8            |
| Maintenance.....                           | 8            |
| Dimensions (unit: mm) .....                | 9            |
| Left View .....                            | 9            |
| Front View.....                            | 9            |
| Right View.....                            | 10           |
| Scanning Instructions.....                 | 11           |
| <b>Chapter 2 System Settings .....</b>     | <b>12</b>    |
| Introduction .....                         | 12           |
| Barcode Programming .....                  | 12           |
| Command Programming.....                   | 12           |
| Programming Barcode/Command/Function ..... | 13           |
| Use of Programming Barcodes .....          | 13           |
| Beep.....                                  | 14           |
| Good Read Beep .....                       | 14           |
| Good Read Beep Type.....                   | 15           |
| Good Read Beep Volume .....                | 15           |

|   |           |
|---|-----------|
| Beep on Unknown Character .....             | 16        |
| Startup Beep .....                          | 16        |
| Beep Indications .....                      | 16        |
| Transmit NGR Message.....                   | 17        |
| Default Settings.....                       | 18        |
| Factory Defaults.....                       | 18        |
| Custom Defaults.....                        | 18        |
| Inquire Product Information.....            | 19        |
| <b>Chapter 3 Scanning Preferences .....</b> | <b>20</b> |
| <b>Chapter 4 Scan Mode.....</b>             | <b>21</b> |
| Sense Mode.....                             | 21        |
| Decode Session Timeout .....                | 21        |
| Timeout between Decodes (Same Barcode)..... | 22        |
| Batch Mode.....                             | 23        |
| Continuous Mode .....                       | 24        |
| Decode Session Timeout .....                | 24        |
| Timeout between Decodes.....                | 25        |
| Timeout between Decodes (Same Barcode)..... | 26        |
| <b>Chapter 5 RS-232 Interface.....</b>      | <b>27</b> |
| Introduction .....                          | 27        |
| RS-232 Parameters .....                     | 27        |
| Baud Rate .....                             | 28        |
| Parity Check.....                           | 29        |
| Data Bit .....                              | 30        |
| Data Bit & Parity Check.....                | 30        |
| Stop Bit.....                               | 31        |
| <b>Chapter 6 USB Interface .....</b>        | <b>32</b> |
| Introduction .....                          | 32        |
| USB HID-KBW .....                           | 32        |
| Polling Rate.....                           | 33        |
| USB Country Keyboard Types .....            | 34        |
| Beep on Unknown Character .....             | 37        |
| Inter-Keystroke Delay.....                  | 38        |
| Convert Case .....                          | 39        |

|                                     |           |
|-------------------------------------|-----------|
| Emulate ALT+Keypad.....             | 40        |
| Function Key Mapping .....          | 41        |
| Emulate Numeric Keypad .....        | 42        |
| Code Page .....                     | 42        |
| USB COM Port Emulation .....        | 43        |
| <b>Chapter 7 Symbologies.....</b>   | <b>44</b> |
| Introduction .....                  | 44        |
| Global Settings.....                | 44        |

# Preface

## Introduction

This manual provides detailed instructions for setting up and using the NLS-FR4060-30/NLS-FR4060-38 desktop barcode scanner (hereinafter referred to as “**FR40 scanner**” or “**the scanner**”).

## Chapter Description

- ✧ *Chapter 1, Getting Started* : Gives a general description of FR40 scanner.
- ✧ *Chapter 2, System Settings* : Introduces configuration methods and describes how to configure general parameters of FR40 scanner.
- ✧ *Chapter 3, Scan Preferences* : Describes how to adjust the scanner to decode barcodes on different mediums.
- ✧ *Chapter 4, Scan Mode* : Describes how to configure scan mode.
- ✧ *Chapter 5, RS-232 Interface* : Describes how to configure RS-232 communication parameters.
- ✧ *Chapter 6, USB Interface* : Describes how to configure USB communication parameters.
- ✧ *Chapter 7, Symbologies* : Lists all supported symbologies and describes how to configure the relevant parameters..
- ✧ *Chapter 8, Prefix & Suffix* : Describes how to use prefix and suffix to customize scanned data.
- ✧ *Appendix* : Provides factory defaults table and a bunch of frequently used programming barcodes.

---

## Explanation of Icons

This icon indicates something relevant to this manual.

This icon indicates this information requires extra attention from the reader.

This icon indicates handy tips that can help you use or configure the scanner with ease.

This icon indicates practical examples that can help you to acquaint yourself with operations.

# Chapter 1 Getting Started

## Introduction

The FR40 scanner reads a 1D or 2D barcode by capturing its image. Adopting the advanced **UIMG** technology independently developed by Newland Auto-ID Tech, it provides users with Regular mode and Screen mode, tailored to different scanning needs.

An illustrated introduction to the FR40 scanner is included in this chapter. If you have an FR40 scanner at hand, make good use of it to develop a better understanding of this manual. This chapter is written for normal users, maintenance staff and software developers.

## Features of the FR40

- Comprehensive data capture: most 1D and 2D barcodes.
- Speedy and accurate decoding capability: integrates high-performance processor and barcode decoder board.
- Easy to configure and update.

## Unpacking

Open the package and take out FR40 scanner and its accessories. Check to make sure everything on the packing list is present and intact. If any contents are damaged or missing, please keep the original package and contact your dealer immediately for after-sales service.

---

## FR40 Scanner

**Regular/Screen Mode Switch:**  
Press it to toggle between the Screen mode (red LED lights up) and Regular mode (green LED lights up).

**LED:**  
LED flashes once: Barcode is decoded.

---

## The Pinout of the Data Port (default)

| PIN | Signal | Type | Function      |
|-----|--------|------|---------------|
| 1   | NC     | -    | No connection |
| 2   | NC     | -    | No connection |
| 3   | VCC    | P    | Power+ (+5V)  |
| 4   | TXD    | O    | RS-232 output |
| 5   | RXD    | I    | RS-232 input  |
| 6   | NC     | -    | No connection |
| 7   | NC     | -    | No connection |
| 8   | GND    | P    | Ground        |
| 9   | D-     | I/O  | USB signal    |
| 10  | D+     | I/O  |               |

## Connecting the FR40 to a Host

The FR40 scanner must be connected to a Host in actual application, such as PC, POS or any intelligent terminal with USB or RS-232 port, via a communication cable, either USB or RS-232 cable.

### USB

USB port on the Host

### RS-232

RS-232 port on the Host

---

## Using USB Cable

Connect the FR40 scanner to a Host through a USB cable with RJ45 and USB connectors:

1. Plug the RJ45 connector into the data port on the scanner.
2. Plug the USB connector into the USB port on the Host.

---

## Using RS-232 Cable

Connect the FR40 scanner to a Host through a RS-232 cable with RJ45, RS-232 and power connectors:

1. Plug the RJ45 connector into the data port on the scanner.
2. Plug the RS-232 connector into the RS-232 port on the Host.
3. Connect the supplied power adaptor to the power connector of the RS-232 cable.

---

## Power On, Power Off, Reboot

### Power on the scanner

Connect the FR40 scanner to a Host. Then the scanner will be turned on.

### Power off the scanner

Remove the communication cable from the FR40 scanner; or remove the USB cable from the Host; or disconnect the power adaptor from mains.

### Reboot the scanner

If the FR40 scanner stops responding to input or runs abnormally, turn off the scanner and then turn it back on.

## Maintenance

- ✧ The scan window should be kept clean.
- ✧ Do not scratch the scan window.
- ✧ Use soft brush to remove the stain from the scan window.
- ✧ Use the soft cloth to clean the window, such as eyeglass cleaning cloth.
- ✧ Do not spray any liquid on the scan window.
- ✧ Do not use any detergent to clean other parts of the device except for water.

The warranty **DOES NOT** cover damages caused by inappropriate care and maintenance.

---

**Dimensions (unit: mm)**

**Left View**

**Front View**

---

**Right View**

---

## Scanning Instructions

When the FR40 scanner is in the Sense scan mode, you can follow the steps below to scan a barcode:

1. Connect the scanner to a Host with the cable. Then the scanner will be powered on.
2. Present a barcode to the center of the scan window. Then the scanner will project a red beam and start to decode the barcode.
3. If the barcode is decoded successfully, the scanner will emit a good read beep and the decoded data will be sent to the Host.

0006010

**【Enter Setup】**

## Chapter 2 System Settings

### Introduction

There are two ways to configure the FR40 scanner: barcode programming and command programming.

#### Barcode Programming

The FR40 scanner can be configured through scanning a number of programming barcodes. In the following sections, we will explain the available options and features and provide the barcodes to program them.

This programming method is straightforward. However, it requires manually scanning barcodes. As a result, errors are likely to occur.

#### Command Programming

The FR40 scanner can also be configured by command strings sent from the Host. In the following sections, the commands will be provided along with programming barcodes.

Users can also develop an application to send those command strings to their scanners.

0006000

**\*\*【Exit Setup】**

0006010

**【Enter Setup】**

## Programming Barcode/Command/Function

The figure above is an example that shows you the programming barcode and command for the Exit Setup function:

1. The **Exit Setup** barcode
2. The **Exit Setup** command
3. The function/feature that can be enabled by using the programming barcode or command listed above.
4. \*\* indicates factory default settings.

## Use of Programming Barcodes

Scanning the **Enter Setup** barcode can enable the scanner to enter the setup mode. Then you can scan a number of programming barcodes to configure your scanner. To exit the setup mode, scan the **Exit Setup** barcode.

Some functions or options may involve parameter value settings that require scanning numeric barcodes. To find the numeric barcodes, see the “**Digit Barcodes**” section in **Appendix**.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

---

Programming barcode data can be transmitted to the Host. Scan the appropriate barcode below to enable or disable the transmission of programming barcode data (programming commands) to the Host.

0002000

**\*\* 【Do Not Transmit Programming Barcode Data】**

0002010

**【Transmit Programming Barcode Data】**

## Beep

### Good Read Beep

Scanning the **Good Read Beep Off** barcode disables the scanner's ability to beep upon a successful decode of non-programming barcode; scanning the **Good Read Beep On** barcode can enable it.

0203010

**\*\* 【Good Read Beep On】**

---

## Good Read Beep Type

0203020

**【Type 1】**

0203022

**\*\* 【Type 3】**

0203021

**【Type 2】**

## Good Read Beep Volume

0203030

**\*\* 【Loud】**

0203032

**【Low】**

0203031

**【Medium】**

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

## Beep on Unknown Character

Due to the differences in keyboard layouts, some characters contained in barcode data may be unavailable on the selected keyboard. As a result, the scanner fails to transmit the unknown characters.

Scan the appropriate barcode below to enable or disable the emission of beep when an unknown character is detected.

1103030

**\*\* 【Do Not Beep on Unknown Character】**

1103031

**【Beep on Unknown Character】**

## Startup Beep

0204001

**\*\* 【Startup Beep On】**

0204000

**【Startup Beep Off】**

## Beep Indications

| Beep Sequence                      | Indication  |
|------------------------------------|---|
| 4 ascending beeps                  | The scanner is powered up (if the Startup Beep is on).  |
| 1 beep                             | A non-programming barcode was decoded (if the Good Read Beep is on).  |
| 2 beeps                            | A programming barcode was decoded.  |
| 3 short low beeps and 2 high beeps | The scanner failed to decode a programming barcode.   |
| 1 long low beep                    | The scanner detected an unknown character when using USB HID-KBW (if the Beep on Unknown Character is enabled). |

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

---

## Transmit NGR Message

Scan the appropriate barcode below to select whether or not to transmit a user-defined NGR (Not Good Read) message when the scanner fails to decode a barcode.

0320010

**【Transmit NGR Message】**

0320000

**\*\* 【Do Not Transmit NGR Message】**

## Edit NGR Message

To edit an NGR message, scan the **Edit NGR Message** barcode and the numeric barcodes corresponding to the ASCII values (hex) of desired characters and then scan the **Save** barcode.

An NGR message can contain 0-7 characters (ASCII value of character: 0x00-0xFF).

0320020

**【Edit NGR Message】**

**E**  
*example*

### Example: Set the NGR message to “!ERR”

1. Check the hex values of “!ERR” in the ASCII Table. (“!ERR”: 21, 45, 52, 52)
2. Scan the **Enter Setup** barcode.
3. Scan the **Edit NGR Message** barcode.
4. Scan the numeric barcodes “2”, “1”, “4”, “5”, “5”, “2”, “5” and “2”.
5. Scan the **Save** barcode.
6. Scan the **Exit Setup** barcode.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

## Default Settings

### Factory Defaults

Scanning the following barcode can restore the scanner to the factory defaults.

You may need to reset all parameters to the factory defaults when:

- ✧ scanner is not properly configured so that it fails to decode barcodes.
- ✧ you forget previous configuration and want to avoid its impact.

0001000

**【Restore All Factory Defaults】**

### Custom Defaults

Custom defaults make it possible to save the frequently-used settings on the scanner.

Scanning the **Save as Custom Defaults** barcode can save the current settings as custom defaults. Once custom default settings are stored, they can be recovered at any time by scanning the **Restore All Custom Defaults** barcode.

Custom defaults are stored in the non-volatile memory and they won't be lost when power is removed.

0001150

**【Save as Custom Defaults】**

0001160

**【Restore All Custom Defaults】**

Restoring the scanner to the factory defaults will not remove the custom defaults from the scanner.

0006000

**\*\*【Exit Setup】**

0006010

**【Enter Setup】**

---

## Inquire Product Information

You can scan the barcode below to inquire the scanner information (such as firmware version, model number, serial number, manufacture date). The result will be sent to the Host.

9876537

**【Inquire Product Information】**

0006000

**\*\*【Exit Setup】**

0006010

**【Enter Setup】**

## Chapter 3 Scanning Preferences

The scanner can capture barcodes printed on paper labels or displayed on the screen of a mobile phone. Select a mode that fits your application..

- ◇ **Regular Mode:** Read barcodes printed on paper or objects.
- ◇ **Screen Mode:** Read barcodes off mobile phones or LCD displays.

### Switch between the Regular and Screen modes:

Method 1: Press the button at the top of the scanner.

Method 2: Scan the **Screen Mode** barcode to activate the Screen mode (indicated by red LED); scan the **Regular Mode** barcode to activate the Regular mode (indicated by green LED).

0313141

**\*\* 【Regular Mode】**

0313142

**【Screen Mode】**

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

## Chapter 4 Scan Mode

### Sense Mode

If the Sense mode is enabled, presenting a barcode to the scanner activates a decode session. The session continues until the barcode decodes or the decode session timeout expires or the barcode is moved away from the scanner. Holding down the left or right trigger on the scanner can also activate a decode session. The presence of obstacle between the scanner and barcode can affect the trigger distance.

0302000

**\*\* 【Sense Mode】**

### Decode Session Timeout

This parameter sets the maximum time decode session continues during a scan attempt. If the timeout expires or the barcode decodes, the decode session stops. It is programmable in 1ms increments from 0ms to 3,600,000ms. The default setting is 3,000ms.

0313000

**【Decode Session Timeout】**

**E**  
*sample*

#### Example: Set the decode session timeout to 1500ms

1. Scan the **Enter Setup** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the numeric barcodes "1", "5", "0" and "0".
4. Scan the **Save** barcode.
5. Scan the **Exit Setup** barcode.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

## Timeout between Decodes (Same Barcode)

Timeout between Decodes (Same Barcode) can avoid undesired rereading of same barcode in a given period of time.

To enable/disable the Timeout between Decodes (Same Barcode), scan the appropriate barcode below.

**Enable Timeout between Decodes:** Do not allow the scanner to re-read same barcode before the timeout between decodes (same barcode) expires.

**Disable Timeout between Decodes:** Allow the scanner to re-read same barcode.

0313020

\*\* **【Disable Timeout between Decodes】**

0313030

**【Enable Timeout between Decodes】**

The following parameter sets the timeout between decodes for same barcode. It is programmable in 1ms increments from 0ms to 65,535ms. The default setting is 1,500ms.

0313010

**【Timeout between Decodes (Same Barcode)】**

**E**  
*Example*

**Example: Set the timeout between decodes (same barcode) to 1000ms**

1. Scan the **Enter Setup** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the numeric barcodes "1", "0", "0" and "0".
4. Scan the **Save** barcode.
5. Scan the **Exit Setup** barcode.

0006000

\*\* **【Exit Setup】**

0006010

**【Enter Setup】**

---

## Batch Mode

If the Batch Mode is enabled, presenting barcodes one after another to the scanner or holding down the left or right trigger activates a round of multiple decode sessions. This round of multiple scans continues until you release the trigger or stop presenting barcode to the scanner. Rereading a barcode in the same round is not allowed if it was decoded previously. After a round ends, you need to wait for 20ms or longer before you can start another round.

0302003

**【Batch Mode】**

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

---

## Continuous Mode

If the Continuous mode is enabled, the scanner automatically activates one decode session after another.

0302020

**【Continuous Mode】**

## Decode Session Timeout

This parameter sets the maximum time decode session continues during a scan attempt. If the timeout expires or the barcode decodes, the decode session stops. It is programmable in 1ms increments from 0ms to 3,600,000ms. The default setting is 3,000ms.

0313040

**【Decode Session Timeout】**

**E**  
*example*

### Example: Set the decode session timeout to 1500ms

1. Scan the **Enter Setup** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the numeric barcodes “1”, “5”, “0” and “0”.
4. Scan the **Save** barcode.
5. Scan the **Exit Setup** barcode.

0006000

**\*\*【Exit Setup】**

0006010

**【Enter Setup】**

---

## Timeout between Decodes

This parameter sets the timeout between decode sessions. When a decode session ends, next session will not happen until the timeout between decodes expires. It is programmable in 1ms increments from 0ms to 65,535ms. The default setting is 1,000ms.

0313040

**【Timeout between Decodes】**

**E**  
*sample*

### Example: Set the timeout between decodes to 500ms

1. Scan the **Enter Setup** barcode.
2. Scan the **Timeout between Decodes** barcode.
3. Scan the numeric barcodes "5", "0" and "0".
4. Scan the **Save** barcode.
5. Scan the **Exit Setup** barcode.

0006000

**\*\*【Exit Setup】**

0006010

**【Enter Setup】**

## Timeout between Decodes (Same Barcode)

Timeout between Decodes (Same Barcode) can avoid undesired rereading of same barcode in a given period of time.

To enable/disable the Timeout between Decodes (Same Barcode), scan the appropriate barcode below.

**Enable Timeout between Decodes:** Do not allow the scanner to re-read same barcode before the timeout between decodes (same barcode) expires.

**Disable Timeout between Decodes:** Allow the scanner to re-read same barcode.

0313020

**\*\* 【Disable Timeout between Decodes】**

0313030

**【Enable Timeout between Decodes】**

The following parameter sets the timeout between decodes for same barcode. It is programmable in 1ms increments from 0ms to 65,535ms. The default setting is 1,500ms.

0313010

**【Timeout between Decodes (Same Barcode)】**

**E**  
*sample*

**Example: Set the timeout between decodes (same barcode) to 1000ms**

1. Scan the **Enter Setup** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the numeric barcodes "1", "0", "0" and "0".
4. Scan the **Save** barcode.
5. Scan the **Exit Setup** barcode.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

## Chapter 5 RS-232 Interface

### Introduction

When the scanner is connected to the RS-232 port of a Host, you need to scan the barcode below to enable RS-232 communication and set communication parameters (including baud rate, parity check, data bit and stop bit) to match the Host.

1100000

**【RS-232】**

### RS-232 Parameters

When the scanner is connected to the Host via serial port, it is necessary to maintain consistency in communication parameters configuration on both devices to ensure smooth communication between them. The default settings of the scanner are 9600bps, no parity check, 8 data bits and 1 stop bit.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

---

## Baud Rate

Baud rate is the number of bits of data transmitted per second. Set the baud rate to match the Host requirements.

0100030

**\*\*【9600】**

0100050

**【19200】**

0100000

**【1200】**

0100060

**【38400】**

0100010

**【2400】**

0100070

**【57600】**

0100020

**【4800】**

0100080

**【115200】**

0100040

**【14400】**

0006000

**\*\*【Exit Setup】**

0006010

**【Enter Setup】**

---

## Parity Check

Set the parity type to match the Host requirements.

- ◇ **Odd Parity:** If the data contains an odd number of 1 bits, the parity bit value is set to 0.
- ◇ **Even Parity:** If the data contains an even number of 1 bits, the parity bit value is set to 0.
- ◇ **None:** Select this option when no parity bit is required.

0101000

**\*\* 【None】**

0101020

**【Odd Parity】**

0101010

**【Even Parity】**

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

---

## Data Bit

Set the number of data bits to match the Host requirements.

0103030

**\*\* 【8 Data Bits】**

0103020

**【7 Data Bits】**

## Data Bit & Parity Check

0105010

**【7 Data Bits/Even Parity】**

0105020

**【7 Data Bits/Odd Parity】**

0105030

**\*\* 【8 Data Bits/ No Parity】**

0105040

0105050

**【8 Data Bits/Odd Parity】**

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

---

## Stop Bit

The stop bit(s) at the end of each transmitted character marks the end of transmission of one character and prepares the receiving device for the next character in the serial data stream. Set the number of stop bits to match the Host requirements.

0102000

**\*\* 【1 Stop Bit】**

0102010

**【2 Stop Bits】**

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

## Chapter 6 USB Interface

### Introduction

There are two options for USB connection.

- ◇ USB HID-KBW: The scanner's transmission is simulated as USB keyboard input with no need for command configuration or a driver. The barcode data could be entered by the virtual keyboard directly and it is also convenient for the Host to receive data.
- ◇ USB COM Port Emulation: The USB port on the Host is emulated as a RS-232 port with the same data transmission and configuration as a real RS-232 port. This mode is based on USB DataPipe protocol and thus requires a driver.

### USB HID-KBW

When the scanner is connected to the USB port on a Host, you can enable the USB HID-KBW feature by scanning the barcode below. The scanner's transmission will be simulated as USB keyboard input. The Host receives keystrokes on the virtual keyboard. It works on a Plug and Play basis and no driver is required.

1100020

**\*\* 【USB HID-KBW】**

If the Host allows keyboard input, then no extra software is needed for HID-KBW input.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

---

## Polling Rate

This parameter specifies the polling rate for a USB keyboard. If the Host drops characters, change the polling rate to a bigger value.

1103170

**\*\* 【1ms】**

1103171

## **E** *example*

**Set the scanner to get proper output for Russian encoded with Windows 1251 (PDF417/QR Code/Data Matrix)**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Code Page** barcode from the “**Code Page**” section in Chapter 6.
3. Scan the numeric barcode “1” from Appendix 5.
4. Scan the **Save** barcode from Appendix 6.
5. Scan the appropriate **Default Character Encoding** barcode according to the symbology your application needs from the “**Character Encoding**” section in Chapter 7.
6. Scan the **Russia** barcode from the “**USB Country Keyboard Types**” section in Chapter 6.
7. Scan the **Mode 3** barcode from the “**Emulate ALT+Keypad**” section in Chapter 6.
8. Scan the **Exit Setup** barcode.

## **E** *example*

**Set the scanner to get proper output for Russian encoded with UTF-8 (PDF417/QR Code/Data Matrix)**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Code Page** barcode from the “**Code Page**” section in Chapter 6.
3. Scan the numeric barcode “1” from Appendix 5.
4. Scan the **Save** barcode from Appendix 6.
5. Scan the appropriate **UTF-8** barcode according to the symbology your application needs from the “**Character Encoding**” section in Chapter 7.
6. Scan the **Russia** barcode from the “**USB Country Keyboard Types**” section in Chapter 6.
7. Scan the **Mode 3** barcode from the “**Emulate ALT+Keypad**” section in Chapter 6.
8. Scan the **Exit Setup** barcode.

0006000

**\*\* 【Exit Setup】**

0006010

---

## Beep on Unknown Character

Due to the differences in keyboard layouts, some characters contained in barcode data may be unavailable on the selected keyboard. As a result, the scanner fails to transmit the unknown characters.

Scan the appropriate barcode below to enable or disable the emission of beep when an unknown character is detected.

1103030

**\*\* 【Do Not Beep on Unknown Character】**

1103031

**【Beep on Unknown Character】**

**E**  
*example*

Supposing French keyboard is selected and barcode data "ADF" is being dealt with, the keyboard will fail to locate the "Ð" (0xD0) character and the scanner will ignore the character and continue to process the next one.

**Do Not Beep on Unknown Character:** The scanner does not beep and the Host receives "AF".

**Beep on Unknown Character:** The scanner beeps and the Host still receives "AF".

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

---

## Inter-Keystroke Delay

This parameter specifies the delay between emulated keystrokes. It is programmable in 5ms increments from 0ms to 75ms. Single-digit values must have a leading zero. The default setting is 10ms.

1103050

**\*\* 【No Delay】**

1103052

**【Long Delay (40ms)】**

1103051

**【Short Delay (20ms)】**

1103053

**【Custom Delay】**

**E**  
*xample*

**Set the inter-keystroke delay to 5ms**

1. Scan the **Enter Setup** barcode.
2. Scan the **Custom Delay** barcode.
3. Scan the numeric barcodes "0" and "5".
4. Scan the **Exit Setup** barcode.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

---

## Convert Case

Scan the appropriate barcode below to convert all bar code data to your desired case.

1103040

**\*\* 【No Case Conversion】**

1103043

**【Invert Upper and Lower Case Characters】**

1103041

**【Convert All to Upper Case】**

1103042

**【Convert All to Lower Case】**

**E**  
*xample*

When the **Invert Upper and Lower Case Characters** feature is enabled, barcode data “AbC” is transmitted as “aBc”.

0006000

**\*\* 【Exit Setup】**

0006010

【Enter Setup】

## Emulate ALT+Keypad

This feature allows any ASCII character (0x00 - 0xFF) to be sent over the numeric keypad no matter which keyboard type is selected. Since sending a character involves multiple keystroke emulations, this method appears less efficient.

The following options are available:

- **Disable:** No ASCII character is sent in the ALT+Keypad way.
- **Mode 1:** ASCII characters not supported by the selected keyboard type but falling into 0x20~0xFF are sent in the ALT+Keypad way.
- **Mode 2:** ASCII characters falling into 0x20~0xFF are sent in the ALT+Keypad way.
- **Mode 3:** All ASCII characters (0x00~0xFF) are sent in the ALT+Keypad way.

**Note:** In the event of a conflict between **Function Key Mapping** and **Mode 3, Function Key Mapping** shall govern.

1103060

\*\* 【Disable】

1103061

【Mode 1】

1103062

【Mode 2】

1103063

【Mode 3】

**E**  
*sample*

Supposing US keyboard is selected, barcode data "ADF" (65/208/70) is sent as below:

(1) **Mode 1** is enabled:

"A" -- Keystroke "A"

"D" -- "ALT Make" + "208" + "ALT Break"

"F" -- Keystroke "F"

(2) **Mode 3** is enabled:

"A" -- "ALT Make" + "065" + "ALT Break"

"D" -- "ALT Make" + "208" + "ALT Break"

"F" -- "ALT Make" + "070" + "ALT Break"

0006000

\*\* 【Exit Setup】

0006010

**【Enter Setup】**

## Function Key Mapping

When Function Key Mapping is enabled, function characters (0x00 - 0x1F) are sent as ASCII sequences over the keypad. For more information, see **Appendix 7: ASCII Function Key Mapping Table**.

1103140

**【Enable Function Key Mapping】**

1103130

**\*\*【Disable Function Key Mapping】**

**E**  
*sample*

Barcode data 0x16

|  |                              |        |
|--|------------------------------|--------|
| <br>T | Enable Function Key Mapping  | Ctrl+V |
|  | Disable Function Key Mapping | F1     |

0006000

**\*\*【Exit Setup】**

0006010

**【Enter Setup】**

## Emulate Numeric Keypad

When this feature is disabled, sending barcode data is emulated as keystroke(s) on main keyboard.

To enable this feature, scan the **Emulate Numeric Keypad** barcode. Sending a number (0-9) is emulated as keystroke(s) on numeric keypad, whereas sending other characters like “+”, “\_”, “\*”, “/” and “.” is still emulated as keystrokes on main keyboard.

1103110

**\*\* 【Do Not Emulate Numeric Keypad】**

1103120

**【Emulate Numeric Keypad】**

## Code Page

In order to support more international characters, the **Code Page** programming feature is provided. This feature is only effective when ASCII characters are sent in the ALT+Keypad way. Programming a code page requires scanning numeric barcode (For more information, see **Appendix 8: Code Pages List**). The default code page is Windows 1252 (Latin I).

1103180

**【Set the Code Page】**

**E**  
*Example*

**Example: Set the code page to Windows 1252 (Latin I)**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Code Page** barcode.
3. Scan the numeric barcode “0”.
4. Scan the **Save** barcode.
5. Scan the **Exit Setup** barcode.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

---

## USB COM Port Emulation

If your scanner is connected to the USB port on a Host, the USB COM Port Emulation feature allows the Host to receive data in the way as a serial port does. However, you need to set communication parameters on the scanner to match the Host requirements. A driver is required for this feature.

1100060

**【USB COM Port Emulation】**

0006000

## Chapter 7 Symbologies

### Introduction

Every symbology (barcode type) has its own unique attributes. This chapter provides programming barcodes for configuring the scanner so that it can identify various barcode symbologies. The more symbologies you enable, the more slowly your scanner decodes. It is recommended to disable those that are rarely used to improve the performance of the scanner.

### Global Settings

#### Disable All Symbologies

If the **Disable All Symbologies** feature is enabled, the scanner can only identify the programming barcodes.

0001010

**【Disable All Symbologies】**

#### Enable All Symbologies

If the **Enable All Symbologies** feature is enabled, the scanner will be able to read all supported barcode symbologies as well as the programming barcodes.

0001020

**【Enable All Symbologies】**

0006000

**\*\*【Exit Setup】**

0006010

**【Enter Setup】**

## Video Reverse

Regular barcode: Dark image on a bright background.

Inverse barcode: Bright image on a dark background.

The examples of regular barcode and inverse barcode are shown below.

**Regular Barcode**

**Inverse Barcode**

Video Reverse is used to allow the scanner to read barcodes that are inverted.

**Video Reverse ON:** Read both regular barcodes and inverse barcodes.

**Video Reverse OFF** (default): Read regular barcodes only.

The scanner shows a slight decrease in scanning speed when Video Reverse is ON.

**【Video Reverse ON】**

**\*\* 【Video Reverse OFF】**

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

## 1D Symbologies

### Code 128

#### Restore Factory Defaults

0400000

**\*\* 【Restore the Factory Defaults of Code 128】**

#### Enable/Disable Code 128

0400010

**【Disable Code 128】**

0400020

**\*\* 【Enable Code 128】**

If the scanner fails to identify Code 128 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable Code 128** barcode.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

### Set Length Range for Code 128

The scanner can be configured to only decode Code 128 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

0400030

**【Set the Minimum Length (Default: 1)】**

0400040

**【Set the Maximum Length (Default: 127)】**

If minimum length is set to be greater than maximum length, the scanner only decodes Code 128 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Code 128 barcodes with that length are to be decoded.

**E**  
*xample*

**Set the scanner to decode Code 128 barcodes containing between 8 and 12 characters:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode "8".
4. Scan the **Save** barcode.
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcode "1".
7. Scan the numeric barcode "2".
8. Scan the **Save** barcode.
9. Scan the **Exit Setup** barcode.

0006000

**\*\*【Exit Setup】**

0006010

**【Enter Setup】**

## AIM-128

### Restore Factory Defaults

0423000

**【Restore the Factory Defaults of AIM-128】**

### Enable/Disable AIM-128

0423020

**\*\* 【Enable AIM-128】**

0423010

**【Disable AIM-128】**

If the scanner fails to identify AIM-128 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable AIM-128** barcode.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

### Set Length Range for AIM-128

The scanner can be configured to only decode AIM-128 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

0423030

**【Set the Minimum Length (Default: 1)】**

0423040

**【Set the Maximum Length (Default: 127)】**

If minimum length is set to be greater than maximum length, the scanner only decodes AIM-128 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Code 128 barcodes with that length are to be decoded.

**Set the scanner to decode AIM-128 barcodes containing between 8 and 12 characters:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode "8".
4. Scan the **Save** barcode.
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcode "1".
7. Scan the numeric barcode "2".
8. Scan the **Save** barcode.
9. Scan the **Exit Setup** barcode.

## Interleaved 2 of 5

### Restore Factory Defaults

0405000

**\*\* 【Restore the Factory Defaults of Interleaved 2 of 5】**

### Enable/Disable Interleaved 2 of 5

0405020

**\*\* 【Enable Interleaved 2 of 5】**

0405010

**【Disable Interleaved 2 of 5】**

If the scanner fails to identify Interleaved 2 of 5 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable Interleaved 2 of 5** barcode.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

### Set Length Range for Interleaved 2 of 5

The scanner can be configured to only decode Interleaved 2 of 5 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

0405030

**【Set the Minimum Length (Default: 6)】**

0405040

**【Set the Maximum Length (Default: 127)】**

If minimum length is set to be greater than maximum length, the scanner only decodes Interleaved 2 of 5 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Interleaved 2 of 5 barcodes with that length are to be decoded.

**Set the scanner to decode Interleaved 2 of 5 barcodes containing between 8 and 12 characters:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode "8".
4. Scan the **Save** barcode.
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcode "1".
7. Scan the numeric barcode "2".
8. Scan the **Save** barcode.
9. Scan the **Exit Setup** barcode.

0006000

**\*\*【Exit Setup】**

0006010

**【Enter Setup】**

## Check Digit Verification

A check digit is optional for Interleaved 2 of 5 and can be added as the last digit. It is a calculated value used to verify the integrity of the data.

- ◇ **Disable:** The scanner transmits Interleaved 2 of 5 barcodes as is.
- ◇ **Do Not Transmit Check Digit After Verification:** The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted except the last digit, whereas those failing it will not be transmitted.
- ◇ **Transmit Check Digit After Verification:** The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted, whereas those failing it will not be transmitted.

Since Interleaved 2 of 5 must always have an even number of digits, a zero may need to be added as the first digit when the check digit is added. The check digit is automatically generated when making Interleaved 2 of 5 barcodes.

0405050

**【Disable】**

0405060

\*\* **【Do Not Transmit Check Digit After Verification】**

0405070

**【Transmit Check Digit After Verification】**

If the **Do Not Transmit Check Digit After Verification** option is enabled, Interleaved 2 of 5 barcodes with a length that is less than the configured minimum length after having the check digit excluded will not be decoded. (For example, when the **Do Not Transmit Check Digit After Verification** option is enabled and the minimum length is set to 4, Interleaved 2 of 5 barcodes with a total length of 4 characters including the check digit cannot be read.)

0006000

\*\* **【Exit Setup】**

0006010

**【Enter Setup】**

## ITF-14

ITF-14 is a special kind of Interleaved 2 of 5 with a length of 14 characters and the last character as the check character. By default, ITF-14 is disabled.

ITF-14 priority principle: For the Interleaved 2 of 5 barcodes with a length of 14 characters and the last character as the check character, the ITF-14 configurations shall take precedence over the Interleaved 2 of 5 settings.

0405260

**【Restore the Factory Defaults of ITF-14】**

0405080

**\*\* 【Disable ITF-14】**

0405090

**【Enable ITF-14, Do Not Transmit Check Digit】**

0405100

**【Enable ITF-14, Transmit Check Digit】**

An example of the ITF-14 priority principle: when ITF-14 is enabled and Interleaved 2 of 5 is disabled, the scanner only decodes Interleaved 2 of 5 barcodes with a length of 14 characters and the last character as the check character.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

## ITF-6

ITF-6 is a special kind of Interleaved 2 of 5 with a length of 6 characters and the last character as the check character. By default, ITF-6 is disabled.

ITF-6 priority principle: For the Interleaved 2 of 5 barcodes with a length of 6 characters and the last character as the check character, the ITF-6 configurations shall take precedence over the Interleaved 2 of 5 settings.

0405270

**【Restore the Factory Defaults of ITF-6】**

0405110

**\*\* 【Disable ITF-6】**

0405120

**【Enable ITF-6, Do Not Transmit Check Digit】**

0405130

**【Enable ITF-6, Transmit Check Digit】**

An example of the ITF-6 priority principle: when ITF-6 is enabled and Interleaved 2 of 5 is disabled, the scanner only decodes Interleaved 2 of 5 barcodes with a length of 6 characters and the last character as the check character.

### Set Length Range for Industrial 25

The scanner can be configured to only decode Industrial 25 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

**【Set the Minimum Length (Default: 6)】**

**【Set the Maximum Length (Default: 127)】**

If minimum length is set to be greater than maximum length, the scanner only decodes Industrial 25 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Industrial 25 barcodes with that length are to be decoded.

**E**  
*example*

**Set the scanner to decode Industrial 25 barcodes containing between 8 and 12 characters:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode "8".
4. Scan the **Save** barcode.
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcode "1".
7. Scan the numeric barcode "2".
8. Scan the **Save** barcode.
9. Scan the **Exit Setup** barcode.

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

## Check Digit Verification

A check digit is optional for Industrial 25 and can be added as the last digit. It is a calculated value used to verify the integrity of the data.

- ◇ **Disable:** The scanner transmits Industrial 25 barcodes as is.
- ◇ **Do Not Transmit Check Digit After Verification:** The scanner checks the integrity of all Industrial 25 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted except the last digit, whereas those failing it will not be transmitted.
- ◇ **Transmit Check Digit After Verification:** The scanner checks the integrity of all Industrial 25 barcodes to verify that the data complies with the check digit algorithm. Barcodes passing the check will be transmitted, whereas those failing it will not be transmitted.

0417050

**\*\* 【Disable】**

0417060

**【Do Not Transmit Check Digit After Verification】**

0417070

**【Transmit Check Digit After Verification】**

If the **Do Not Transmit Check Digit After Verification** option is enabled, Industrial 25 barcodes with a length that is less than the configured minimum length after having the check digit excluded will not be decoded. (For example, when the **Do Not Transmit Check Digit After Verification** option is enabled and the minimum length is set to 4, Industrial 25 barcodes with a total length of 4 characters including the check digit cannot be read.)

## Chapter 8 Prefix & Suffix

### Introduction

In many applications, barcode data needs to be edited and distinguished from one another.

Usually AIM ID and Code ID can be used as identifiers, but in some special cases customized prefix and terminating character suffix like Carriage Return or Line Feed can also be the alternatives.

Data editing may include:

- ❖ Append AIM ID/Code ID/custom prefix before the scanned data
- ❖ Append custom suffix after the scanned data
- ❖ Append terminating character to the end of the data

0006000

**\*\*【Exit Setup】**

0006010

**【Enter Setup】**

---

## Global Settings

### Enable/Disable All Prefix/Suffix

**Disable All Prefix/Suffix:** Transmit scanned data with no prefix/suffix.

**Enable All Prefix/Suffix:** Allow to append Code ID prefix, AIM ID prefix, custom prefix/suffix and terminating character to the scanned data before the transmission.

0311000

**\*\* 【Disable All Prefix/Suffix】**

0311010

**【Enable All Prefix/Suffix】**

### Prefix Sequences

2 prefix sequence options are provided.

0317010

**【Code ID + Custom Prefix + AIM ID】**

0317040

**\*\* 【Custom Prefix + Code ID + AIM ID】**

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

## Custom Prefix

### Enable/Disable Custom Prefix

If custom prefix is enabled, you are allowed to append before the scanned data a user-defined prefix that cannot exceed 10 characters. For example, if the custom prefix is “AB” and the scanned data is “123”, the Host will receive “AB123”.

0305000

**\*\* 【Disable Custom Prefix】**

0305010

**【Enable Custom Prefix】**

### Set Custom Prefix

To set a custom prefix, scan the **Set Custom Prefix** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired prefix and the **Save** barcode.

**Note:** A custom prefix cannot exceed 10 characters.

0300000

**【Set Custom Prefix】**

**E**  
*example*

**Set the custom prefix to “CODE” (its hexadecimal value is 0x43/0x4F/0x44/0x45):**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Custom Prefix** barcode.
3. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5”.
4. Scan the **Save** barcode.
5. Scan the **Enable Custom Prefix** barcode.
6. Scan the **Exit Setup** barcode.

0006000

**\*\* 【Exit Setup】**

0006010

**【Enter Setup】**

## AIM ID Prefix

AIM (Automatic Identification Manufacturers) ID defines symbology identifier (For the details, see the **AIM ID Table** section in **Appendix**). If AIM ID prefix is enabled, the scanner will add the symbology identifier before the scanned data after decoding.

0308000

**\*\* 【Disable AIM ID Prefix】**

0308030

**【Enable AIM ID Prefix】**

AIM ID is not user programmable.

## Code ID Prefix

Code ID can also be used to identify barcode type. Unlike AIM ID, Code ID is user programmable. Code ID can only consist of one or two English letters.

0307000

**\*\* 【Disable Code ID Prefix】**

0307010

## Custom Suffix

### Enable/Disable Custom Suffix

If custom suffix is enabled, you are allowed to append after the scanned data a user-defined suffix that cannot exceed 10 characters.

For example, if the custom suffix is “AB” and the scanned data is “123”, the Host will receive “123AB”.

0306000

**\*\* 【Disable Custom Suffix】**

0306010

**【Enable Custom Suffix】**

### Set Custom Suffix

To set a custom suffix, scan the **Set Custom Suffix** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired suffix and the **Save** barcode.

**Note:** A custom suffix cannot exceed 10 characters.

0301000

**【Set Custom Suffix】**

**E**  
*sample*

**Set the custom suffix to “CODE” (its hexadecimal value is 0x43/0x4F/0x44/0x45):**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Custom Suffix** barcode.
3. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5”.
4. Scan the **Save** barcode.
5. Scan the **Enable Custom Suffix** barcode.
6. Scan the **Exit Setup** barcode.

**【Enter Setup】**

---

## Terminating Character Suffix

### Enable/Disable Terminating Character Suffix

A terminating character such as carriage return (CR) or carriage return/line feed pair (CRLF) can only be used to mark the end of data, which means nothing can be added after it.

0309000

**\*\* 【Disable Terminating Character Suffix】**

0309010

**【Enable Terminating Character Suffix】**

0006000

**\*\* 【Exit Setup】**

0006010

【Enter Setup】

---

## Set Terminating Character Suffix

The scanner provides a shortcut for setting the terminating character suffix to CR (0x0D) or CRLF (0x0D,0x0A) by scanning the appropriate barcode below.

0310010

【Terminating Character CR (0x0D)】

0310020

【Terminating Character CRLF (0x0D,0x0A)】

To set a terminating character suffix, scan the **Set Terminating Character Suffix** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired terminating character, and the **Save** barcode.

**Note:** A terminating character suffix cannot exceed 2 characters.

0310000

【Set Terminating Character Suffix】

**E**  
*sample*

**Set the terminating character suffix to “0A”:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Terminating Character Suffix** barcode.
3. Scan the numeric barcodes “0” and “A”.
4. Scan the **Save** barcode.
5. Scan the **Enable Terminating Character Suffix** barcode.
6. Scan the **Exit Setup** barcode.

**【C】**

0000130

**【D】**

0000140

**【E】**

0000150

**【F】**

---

## Appendix 6: Save/Cancel Barcodes

After reading numeric barcode(s), you need to scan the **Save** barcode to save the data. If you scan the wrong digit(s), you can either scan the **Cancel** barcode and then start the configuration all over again, or scan the **Delete the Last Digit** barcode and then the correct digit, or scan the **Delete All Digits** barcode and then the digits you want.

For instance, after reading the **Maximum Length** barcode and numeric barcodes “1”, “2” and “3”, you scan:

- ✧ **Delete the Last Digit:** The last digit “3” will be removed.
- ✧ **Delete All Digits:** All digits “123” will be removed.
- ✧ **Cancel:** The maximum length configuration will be cancelled. And the scanner is still in the setup mode.

**【 Save 】**

**【 Cancel 】**

**【 Delete the Last Digit 】**

**【 Delete All Digits 】**

## Appendix 7: ASCII Function Key Mapping Table

| ASCII Function                | ASCII Value (HEX) | No Function Key Mapping | Function Key Mapping    |
|-------------------------------|-------------------|-------------------------|-------------------------|
| NUL (Null char.)              | 00                | Null                    | Ctrl+2                  |
| SOH (Start of Header)         | 01                | Keypad Enter            | Ctrl+A                  |
| STX (Start of Text)           | 02                | Caps Lock               | Ctrl+B                  |
| ETX (End of Text)             | 03                | Null                    | Ctrl+C                  |
| EOT (End of Transmission)     | 04                | Null                    | Ctrl+D                  |
| ENQ (Enquiry)                 | 05                | Null                    | Ctrl+E                  |
| ACK (Acknowledgment)          | 06                | Null                    | Ctrl+F                  |
| BEL (Bell)                    | 07                | Enter                   | Ctrl+G                  |
| BS (Backspace)                | 08                | Left Arrow              | Ctrl+H                  |
| HT (Horizontal Tab)           | 09                | Horizontal Tab          | Ctrl+I                  |

## ASCII Function Key Mapping Table (Continued)

The function key mappings of the last five characters in the previous table differ from one keyboard layout to another.

| Country/<br>Keyboard Layout | Function Key Mapping |        |         |        |        |
|-----------------------------|----------------------|--------|---------|--------|--------|
|                             | 1B                   | 1C     | 1D      | 1E     | 1F     |
| United States               | Ctrl+[               | Ctrl+\ | Ctrl+]  | Ctrl+6 | Ctrl+- |
| Belgium                     | Ctrl+[               | Ctrl+< | Ctrl+]  | Ctrl+6 | Ctrl+- |
| Scandinavia                 | Ctrl+8               | Ctrl+< | Ctrl+9  | Ctrl+6 | Ctrl+- |
| France                      | Ctrl+^               | Ctrl+8 | Ctrl+\$ | Ctrl+6 | Ctrl+= |
| Germany                     |                      | Ctrl+Ã | Ctrl++  | Ctrl+6 | Ctrl+- |
| Italy                       |                      | Ctrl+\ | Ctrl++  | Ctrl+6 | Ctrl+- |
| Switzerland                 |                      | Ctrl+< | Ctrl+.  | Ctrl+6 | Ctrl+- |
| United Kingdom              | Ctrl+[               | Ctrl+∅ | Ctrl+]  | Ctrl+6 | Ctrl+- |
| Denmark                     | Ctrl+8               | Ctrl+\ | Ctrl+9  | Ctrl+6 | Ctrl+- |
| Norway                      | Ctrl+8               | Ctrl+\ | Ctrl+9  | Ctrl+6 | Ctrl+- |
| Spain                       | Ctrl+[               | Ctrl+\ | Ctrl+]  | Ctrl+6 | Ctrl+- |

---

## Appendix 8: Code Pages List

| Numeric Barcode Needed | Code Page               |
|------------------------|-------------------------|
| 0                      | Windows 1252 (Latin I)  |
| 1                      | Windows 1251 (Cyrillic) |
